1 Int Vector Bubble Sort

Files to submit:

- int_vector_bubble_sort/int_vector_bubble_sort.c

Provided files:

- int_vector_bubble_sort/int_vector_bubble_sort.h

Main function: None

Authorized headers: You are only allowed to use the functions defined in the following headers:

- stddef.h
- errno.h
- assert.h
- err.h

1.1 Goal

Write a function that takes a vector of integers and sorts it completely in ascending order. You will be using the sorting algorithm called *Bubble Sort*. The size of the table will always be correct and superior to zero.

Structure of the vector:

```
struct int_vector
{
    size_t size;
    int data[INT_VECTOR_LENGTH];
};
```

To help you in this endeavor, you will have to first write another function: swap.

```
static struct int_vector swap(struct int_vector vec, size_t i, size_t j);
```

As the name entails, you need to swap the values at index *i* and *j*, then return the vector. Using a temporary value could help greatly.

1.2 Example Swap

```
int main()
{
    struct int_vector vec = {
        .size = 5,
        .data = { 6, 7, 12, 2, 8 }
    };

    vec = swap(vec, 0, 1);
```

(continues on next page)

(continued from previous page)

```
/* vec should be 7 6 12 2 8 */  
  
return 0;  
}
```

1.3 Bubble Sort

Once done, you can use the swap function to code the bubble sort.

```
struct int_vector int_vector_bubble_sort(struct int_vector vec);
```

It is my job to make sure you do yours.
